What's Information Literacy (IL)?

„**Information Literacy** is the capacity of people to:

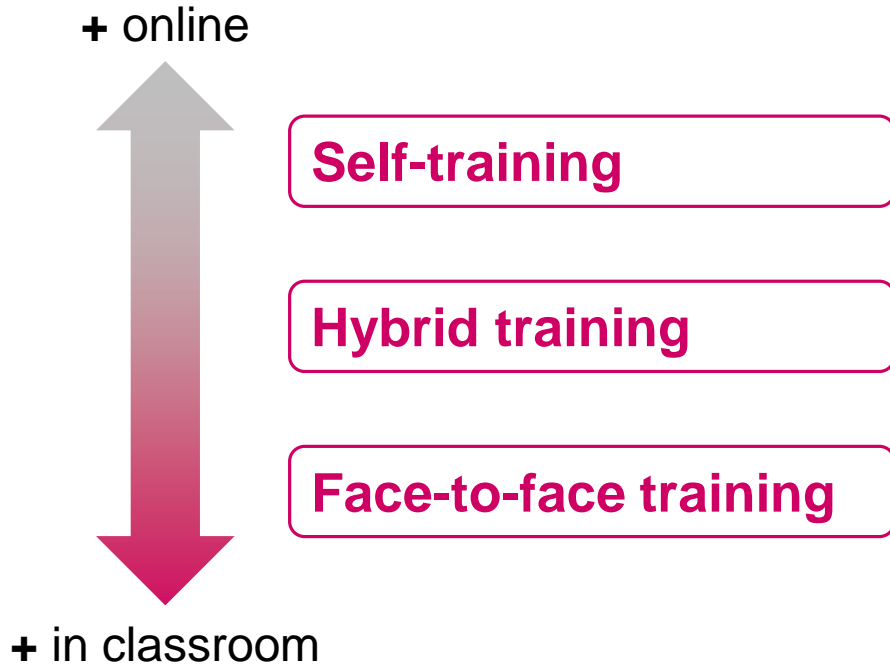

- Recognize their information needs;
- Locate and evaluate the quality of information;
- Store and retrieve information;
- Make effective and ethical use of information; and,
- Apply information to create and communicate knowledge.”

IL Training at UNIGE

Online training platform (infotrack.unige.ch):

IL Training at UNIGE

In 2016 :
119 sessions for BA students
2490 participants
(UNIGE: 8229 BA students)

Limits

- InfoTrack hasn't a system to perform **summative evaluations**
- IL competencies aren't evaluated (and **recognized**) within academic programs (with a few exceptions)
- IL training and assessment should be tailored to each bachelor program (15-800 students, +23 disciplines)

Our questions

Pedagogical issue

How to ensure that the students master these transferable skills (online or in classrooms)?

Strategic issue

How to be well integrated in bachelor programs?

Logistical issue

How to manage the assessment of hundreds of students?
